

Hemorrhoids and Exercise: Some good Info

Hemorrhoids and exercise are probably two words which a lot of people don't really relate along with one another. The former is a condition that is painful, annoying, and embarrassing for most people to deal with. The latter is physical exertion that's meant to strengthen the body as well as improve physique. The problem stems from the fact that some exercises can worsen a person's hemorrhoids.

What are Hemorrhoids?

Simply put, hemorrhoids are different parts of the blood vessels that can be found in the anus that have become bumpy or swollen. Hemorrhoids come in two forms, either inside the or outside of you.

An internal hemorrhoid tends to be painless with rectal bleeding during bowel movements being the only apparent symptom. An outside hemorrhoid is the one that causes a lot of discomfort and itching in the area surrounding the anus.

Hemorrhoids tend to be of a nuisance than anything else, but if left unchecked, can be the cause of intense pain.

Hemorrhoids and Physical Exercise Do Not Always Mix

Exercise is actually an important factor in living a healthy lifestyle. The problem with some exercises is that they can worsen someone's hemorrhoids. You need to know what kinds of workouts are safe when someone has hemorrhoids.

Weight Lifting Will be One of the Most Essential Activities in a Exercise Program

As any weight lifter will attest to, proper breathing is very important. However, some breathing techniques can actually worsen a person's hemorrhoids. The Valsalva maneuver is a technique used by weight lifters to hold their breath while lifting weights. This should actually be avoided as the maneuver may put unwanted stress about pre-existing hemorrhoids.

The Rule of Thumb When It Comes to that Exercise to Prevent is the Pain

Any exercise that puts unwanted strain on the hemorrhoids will result in pain. Biking, horseback riding, and rowing are some of the few exercises that can put pressure on sensitive areas. Activities that put pressure on the lower back and lower abdomen should also be avoided as much as possible. Weightlifting and resistance.

Exercises that Help Alleviate Problems With or Even Treat Hemorrhoids

Any kind of exercise that promotes blood flow is the kind of exercise that helps prevent and treat hemorrhoids. The increased amount of blood flow means much more oxygen and vitamins and minerals are getting to the affected areas. The oxygen and nutrients helps by reducing the inflammation around the affected area.

Cardio Exercises are Excellent for Increasing Blood Flow

Running, walking, jogging, and swimming are all cardiovascular exercises that are suitable for people who currently have hemorrhoids. It should be noted that not all cardio exercises are ideal for those who have hemorrhoids. Cycling for example is an exercise that assists promote blood flow, but still puts stress on sensitive areas.
